

Content Assets for Your PMO

Processes on Demand™

When projects break down, the fall-out can be devastating. The organization does not advance. Time, money and effort are wasted. Participants and stakeholders are left frustrated and spent. With so much riding on project success, it's extraordinary that more than half undertaken become either challenged -- or outright fail.¹

At Tramore Group, we've recognized a pattern of activity among organizations that attempt to beat the odds. Many turn to IT project and portfolio management systems to improve project effectiveness. However, this can provide its own challenges, such as ensuring the integrity and consistency of project information presented to management. This is tough to achieve, if project data is being entered in various ways on various templates throughout the organization.

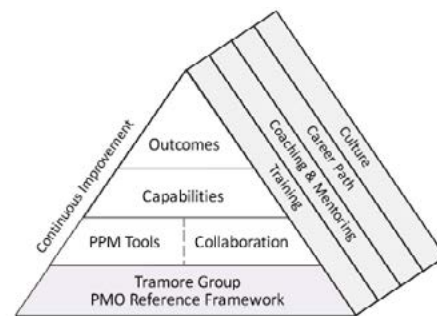

When outside Project Managers are brought in, a bad situation can be made worse if they inject their own templates, documents and methodologies, without understanding what was already in place.

Typically, standardizing key project elements is seen as the key to success, and many firms attempt this by establishing a Project Management Office (PMO). But PMOs can take years to ramp up and success rates are generally low.

Standardize and Centralize – Key to Success

Yet, standardization is indeed critical. As is creating one central destination point affording all involved in the project easy access to the elements they need to do their part. However, building a PMO central repository and standardizing everything -- from reporting processes, documents

and templates, to training and education activities -- is a huge undertaking. It can also be hugely expensive, and take years to complete, while critical projects suffer. Having witnessed the agony many organizations endure trying to do this themselves, and the disappointing results that can arise from outsourcing these tasks -- which Tramore Group is subsequently engaged to untangle -- we knew there had to be a better way.

Processes on Demand™ – A Better Way

Introducing *Processes on Demand™* -- a better way to achieve project delivery effectiveness and improved project outcomes -- a proven solution with over 1,000 customers worldwide. This flexible solution installs in minutes, to display the client's own corporate identity on every screen and template. With *Processes on Demand™*, organizations can use common processes and documents within days of implementation. In fact, *Processes on Demand™* delivers in hours what many organizations spend years trying to achieve, often with limited success -- and it does so at a fraction of the cost.

How *Processes on Demand*™ Works

Processes on Demand™ provides a full suite of PMO content assets that project participants access with their browser. Assets include: processes and methodologies, an extensive library of over 250 standardized templates and on-line learning modules, tips and techniques, PMO policies and dashboards, and a comprehensive knowledge centre that the organization can build upon. This eliminates years of wasted time designing a basic framework, templates and the like -- and propels the organization toward project success, organizational change and improved competitiveness.

Episode #	Episode Type	Episode Title
1	Video	Business Case Charter SOW
2	Video	Stakeholder Analysis
3	Video	Perform Integrated Change Control
